

Walsh Vineyards Management Inc. is one of the largest and most well respected vineyard management companies in the world famous Napa and Sonoma Valleys. Their outstanding reputation stems from over 26 years of expert vineyard management of high-end wineries that consistently produce ultra premium wine grapes. In addition to custom vineyard management, Walsh Vineyards Management also supplies viticulture consulting services and mechanical grape harvestings.

*“The right equipment for the job is vital for any successful operation and the Yanmar T80 is the right equipment for any vineyard operation”,* says Denis Evans, the Director of Equipment and Transport Services of Walsh Vineyards Management, Inc.

The Yanmar T80 is a low compact, tracked tractor with the power and versatility necessary for working in vineyards. A couple years ago, Yanmar brought a few prototype crawler tractors to California to test their performance for use in the vineyard market. Yanmar is proud to say that Walsh Vineyards Management participated in the test program from the first generation prototype.

Denis contributed many ideas and innovations from a user standpoint to improve the functions and operation of the prototype tractor. Yanmar incorporated many of Denis’ ideas, resulting in the Yanmar T80 being an excellent staple or addition for any vineyard.

*“I was excited to be involved in the Yanmar T80 project”,* says Denis. *“Now, I am a proud, satisfied owner.”*

The rainy winter season in California can be detrimental to any farming operation due to saturated soil conditions and compaction concerns. Ordinarily, time is lost while the farmer waits for the soil to dry out before they will risk the chance of getting a wheeled tractor stuck in the field. Now, there is no need to waste precious time. With the Yanmar T80, you can get the job done when it needs to get done, even if the field conditions are not optimal. The Yanmar T80’s rubber tracks provide a large footprint for low compaction, significantly reducing the chance of getting stuck in the mud; saving time and increasing productivity.

*“The value of the T80 goes beyond its low compaction. We use it year-around for more applications than you ever imagined,”* says Denis.

Look into how the Yanmar T80 can improve your farming operation. Get on Track!™
